Bowel Preparation Instructions:
Inpatient Capsule Study
Golytely

Inpatient capsule endoscopy study
The small intestines are hard to reach with an endoscopy or a colonoscopy. Doctors use a capsule endoscopy study so your doctor can see your small intestines that are hard to reach.

A capsule study uses a pill-sized video camera that you will need to swallow or have placed with an endoscope procedure. The pill-sized camera takes pictures of your small intestine as it passes through it. It sends the pictures to a device that you will wear on your body during the study.

It is very important to follow all the instructions to prepare for capsule study. Your body must be clean so the doctor can see as the pill-sized camera passes through the body.

After the capsule study is finished, you will come back to the office so the device on your body can be removed and so that the pictures can be put onto a computer for the doctor to look at. The pill-sized camera will not be used again and will come out when you go to the bathroom. You will not need to save it.

After you have swallowed the capsule you will have to wait two hours before you can drink clear liquids. You can take medications. You can have a light meal four hours after swallowing the capsule.

The day before your capsule study

- **At 8 a.m., stop smoking.** You may not smoke for 24 hours before your capsule study.
- **At 1 p.m., stop eating food** and start your clear liquid diet. Add water to your container of Golytely/Nulytely/Colyte and shake well. Place Golytely in the refrigerator.
- If you would prefer to drink the prep at room temperature, you may take it out of the fridge at **2 p.m.**
- You may add a Crystal Light packet to each glass to improve the taste of the prep. Do not add ice to the bowel preparation.
- **At 4 p.m., start drinking two liters of Golytely/Nulytely/Colyte.** You will drink all of the bowel preparation mixture.
- Drink a glass every 15 minutes until you have finished all of it. It will take you four to six hours to finish drinking it. You must finish drinking all your prep mixture.
- Some people may feel nauseous, bloated, or vomit. If this happens, take a 15-30-minute break and then try drinking the prep mixture again.
- **At 10 p.m., stop drinking clear liquids and water.** You may take necessary medications with a sip of water only.
The day of your capsule study

- You may take necessary medications with a sip of water before 6 a.m. only.
- Do not take any medications after 6 a.m. on the day of the capsule study.
- Do not eat or drink prior to your capsule study

After your capsule study

- Two hours after your capsule study has started: You can drink clear liquids. You may not eat food. Avoid all clear liquids that are red or purple in color.
- Four hours after your capsule study has started: You can take medications and eat a light meal. Avoid red meats.
